  This sequence was finished as follows unless otherwise noted: all regions were double-stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed
                                                                                                                                                                                                                                                                                                                              Submitted (20-OCT-2001) NIH Intramural Sequencing Grovement Circle, Gaithersburg, MD 20877, USA On Oct 20, 2001 this sequence version replaced gi

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Direct Submission
Submitted (24 MAR-1998) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, Tx 77030, USA
On Mar 23, 1998 this sequence version replaced gi:2960508.
Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Exon/Intron boundaries of identified were canonical splice junctions that across the splice junctions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (21-MAR-1998) Human Genome Sequencing of Molecular and Human Genetics, Baylor College Baylor Plaza, Houston, TX 77030, USA (bases 1 to 159446)

It currently consists of 17 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Submitted (21-APR-2000) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA On May 25, 2000 this sequence version replaced gi:7630727. All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washington.edu/RM/RepeatMasker.html Genome Center
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Boguslavkiy,L., Boukhgalter,B., Brown,A., Burkett,G., Campopiano,A., Castle,A., Choepel,Y., Colangelo,M., Collins,S., Collymore,A., Cooke,P., DeArellano,K., Dewar,K., Diaz,J.S.,

```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

```
This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
restriction digest.
```

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
McPherson, Department of Genetics, Washington University, St. Louis
MCD. For additional information about the map position of this
MCD. For additional information about the map position of this

SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P., Zhao, B., Frengen, E., Tateno, M., Catanese, J. and de Jong, P. J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute

(http://bacpac.med.buffalo.edu)
VECTOR: pBACe3.6
NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the right is ACO24637. Actual start of this clone is at base position 1 of RP11-299120; actual end is at base position 166424 of RP11-299120.

The sequence $H_{\rm N}$ NH0299120 from base position 138712 to 140784 contains a tandem repeat. The tandem size is believed to be agreement with digest information. in

The sequence $H_NH0299120$ from base position 141597 to 143830 contains a tandem repeat. The tandem size is believed to be in agreement with digest information, however, the sequence fidelity cannot be guaranteed.

The sequence H_NH0299120 contains a variable CT run from base position 60019 to 60385. The sequence fidelity cannot be guaranteed

```

clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RP11-145M22; the clone sequenced to the right is RP11-219H23. Actual start of this clone is at base position 1 of RP11-353K11; actual end is at base position 199721 of RP11-353K11.

The region from 147655 to 147703; 147819 to 147875 are only covered by pcr products from clone DNA. Single subclone region exist between 147951 and 147966. Polymorphisms exist between AC088539 and AC092636. Data from AC068539 and AC079395 was used to finish AC092636.

The sequence of AC068117 has been incorporated into AC092636 Location/Qualifiers

* NOTE: This is a 'working draft' sequence. It currently

* consists of 7 contigs. The true order of the pleces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Center

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

provide a target for diagnosing a disease or predisposition to disease mediated by the peptide, and in pharmacogenomic analysis. The peptides are also useful for treating a disorders characterised by absence of, inappropriate or unwanted expression of the protein. The nucleic acids are also useful in drug screening assays and as a target for treatment by the compounds identified through drug screening. The invention also provides vectors for gene therapy in patients with aberrant expression of the gene encoding the transporter protein. The gene of the invention has been found to be expressed in humans in the kidney, testis, heart, placenta, small intestine and liver. The gene has been localised to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               exon
                                                                                                                           The invention relates to an isolated human transporter protein trelated to the zinc transporter subfamily. Polynucleotides and polypeptides of the invention are useful for treating a disease
                                                                                                                                                                                           Novel human transporter proteins, related to zin subfamily, useful as model for developing human serves as target for human therapeutics -
                                                                                                                                                                                                                                                                                                                                                                                                                                     exon

                                                   The present invention describes primer sets for synthesising 5602 cc full-length cDNAs defined in the specification. Where a primer set cc comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of cc the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the cc sequence and an oligonucleotide comprising a sequence complementary to a complementary strand of a polynucleotide which comprises a 5'-end cc polynucleotide which comprises a 3'-end sequence, where the cc oligonucleotide comprises a 3'-end sequence, where the cc oligonucleotide comprises a 3'-end sequence, where the cc oligonucleotide comprises a st least 15 nucleotides and the combination of the specification. The primer sets can be used in antisense therapy and cc in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the cd detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13638 and CC AAB95803 represent human amino acid sequences; AAB92446 to AAH13632 crepresent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    29-JUL-1999;

                        Q
                                                                                                                                                                                                                                           δÃ
                                                                                                                                                                                                                                                                                                                                                     CC comprises: (a) an oligo-dp primer and an oligonucleotide complementary ctrand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the cC oligonucleotide comprises at least 15 nucleotides; or (b) a combination (c) of an oligonucleotide comprising a sequence complementary to the cC complementary strand of a polynucleotide which comprises a 5'-end cC sequence and an oligonucleotide comprising a sequence complementary to a C polynucleotide which comprises a '-end sequence, where the cC oligonucleotide comprises a '-end sequence, where the cC oligonucleotide comprises a tleast 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primer sets can be used in antisense therapy and classification. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAB95893 represent human amino acid sequences; AAB9246 to CC AAB95893 represent human amino acid sequences; AAB9246 to CC of the present invention.

RESULT 4
AAH51627
CC human chromosome 13q31-q33 locus. The nucleotide sequences contain
CC biallelic markers and polymorphisms. Sequences AAH51622 - AAH51626 and
CC AAH62907 - AAH62915 represent cDNA human sbq1 cDNA sequences and protein
CC products. AAH51627 - AAH51631 and AAB62916 - AAB62918 represent q35018
CC cDNA sequences and protein products. Primers AAH51632 - AAH51699 are used
CC to isolate sbg1 cDNAs, while sbg1 exons from different primates are
CC represented by sequences AH51642 - AAH51699. Nucleotide sequences of
CC amplicons which comprise biallelic markers located on the chromosome
CC are represented in the sequences by degenerate/undefined base codes. PCR
CC primers AAH51818 and AAH51819 are used in the isolation of sequences of
CC the invention. The biallelic marker containing nucleotide sequences of
CC used to determine the identity of the nucleotide at a biallelic marker in
CC a sample DNA sequence. The nucleotide sequences may be labelled and used
CC greated biallelic marker in a biological sample from single or multiple
CC subjects. By determining the frequency of a biallelic marker in a
CC population an association between a genotype and a trait, a haplotype and
CC a trait and a phenotype and a trait can be detected. The sequences can be

amplicons which comprise biallelic markers located on the chromosome 1331-q33 locus are represented in AAH51700 - AAH51817. Biallelic markers are represented in the sequences by degenerate/undefined base codes. PCR primers AAH51818 and AAH51819 are used in the isolation of sequences of the invention. The biallelic marker containing nucleotide sequences are used to determine the identity of the nucleotide at a biallelic marker in a sample DNA sequence. The nucleotide sequences may be labelled and used for genotyping by determining the identity of a nucleotide at a Region D-related biallelic marker in a biological sample from single or multiple subjects. By determining the frequency of a biallelic marker in a population an association between a genotype and a trait, a haplotype and a trait and a phenotype and a trait can be detected. The sequences can be used to determine a predisoposition to or early onset of schizophrenia or bipolar disorder or a beneficial response to or side effects related to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAB62907 - AAB62915 represent cDNA human sbg1 cDNA sequences and protein products. AAH51627 - AAH51631 and AAB62916 - AAB62918 represent g35018 cDNA sequences and protein products. Primers AAH51632 - AAH51699 are used to isolate sbg1 cDNAs, while sbg1 exons from different primates are represented by sequences AAH51642 - AAH51699. Nucleotide sequences of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g34665, sbg2, g35017 and g35018 nucleic acid sequences located on the human chromosome 13g31-g33 locus. The nucleotide sequences contain biallelic markers and polymorphisms. Sequences AH51602 - AH51626 and biallelic markers
                                                        treatment against schizophrenia or bipolar disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides the protein and coding sequences of 973 human testicular antigens, and fragments of their genomic sequences. The sequences can be used in the treatment of cardiovascular, urinary system reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a DNA encoding a protein fragment of the immertion
                    Diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumor in a prinvolves detecting the level of expression of two or more

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9505
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatotropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, orgen toxicity, drug efficacy and drug metabolism.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

(GCA), by detecting the level of expression of gene(s) (Gs) identified by CC DNA chip analysis as given in the specification, and comparing the expression level in an unactivated CC GC, where differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent C that alters the expression of at least one gene in Gs; (2) screening (M2) GA by contacting GC with an agent C that alters the expression of at least one gene in Gs; (2) screening (M3) GF an agent capable of modulating GCA or an inflammation (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a C subject to a pathogen or sterile inflammatory disease using the CC gene expression profile; (3) detecting (M4) an inflammation (especially C chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation; (M3) an inflammation; (M3) an inflammation; (M3) and (M3)
                                                                                                                                   modulating GA; M3 is useful for screening an agent capable of modulating GCA preferably in an inflammation in a tissue; M4 is useful for detecting an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, renal reperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, Crohn's disease, ulcerative colitis, periodontal disease; also bacterial infection, viral infection, protozoal infection, fungal infection and M5 is useful for treating one of the above conditions. The present sequence represents a gene differentially expressed in granulocytes. Note: The sequence data for this patent did not form part
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The
